Itinerary

5 December: Early start and along the park entrance track we encountered the usual suspects such as Coastal Miner, Least Seedsnipe y Yellowish Pipit. Continuing to the interior of the reserve we encountered a group of Raimondi's Yellowfinch feeding on the dry slopes caused by the change to the summer season. A little higher in the valley a pair of Thick-billed Miners responded splendidly to playback. Finally a short afternoon excursion easily got us a pair of endemic Cactus Canastero's en Quebrada Guaybito.
